

## 2-Day Implant Care Practitioner Training Program: Level 2 A Multi-Disciplinary Perspective

Advances in surgical and restorative dentistry have revolutionized our ability to revive even the hopeless dentition. Implant dentistry has improved the lives of millions of edentate people restoring facial appearance, speech, and eating ability. As a result, dental implants have become the standard of care for the replacement of missing teeth. To prepare for this growing population, dental hygienists need to become educated about all the possible dental implant complications and their origins. Also needing close study is how to safely and effectively meet the dental hygiene needs of the edentulous patient with advanced implant dentistry. This course is one of the most comprehensive programs on these topics discussing a range of complications in implant dentistry, prevention strategies, diagnostic, and management modalities. Participants will learn through a multi-disciplinary perspective reviewing surgical, restorative, laboratory, and maintenance phases of implant dentistry as well as solutions to complications.

**February 9-10, 2019**  
 Limited to 28 Participants  
**16 CE**

### Upon completion of this course, the clinician will:

- Recognize complications involving single, multiple, and full arch treatments.
- Understand peri-implant soft and hard tissue deficiencies.
- Discuss the dental hygienists role in regeneration procedures.
- Learn about treatment modalities for the maintenance of edentulous patients with advanced implant dentistry.
- Discuss communication modalities for the conversion of prospective implant patients to case acceptance

**COURSE FEE**  
**895 (both days)**  
**795 before 12/15/19**
